REVOLUTIONIZING THE NEXT GENERATION OF CANCER CARE:

West Campus Ambulatory Facility

A new West Campus Ambulatory Facility will allow the OSUCCC – James to revolutionize the next generation of cancer care and will be a space built on our simple but powerful idea: better lives for people with cancer, from diagnosis to treatment through survivorship.

The project will enable us to compete and provide best-in-class patient care through new and expanded outpatient facilities and to recruit and retain top researchers and clinicians.

The facility will include: multidisciplinary care allowing our patients to see more than one specialist in a day so they can get back to their lives faster; a one-of-a-kind proton therapy facility providing new therapies not available anywhere else; surgical sites; and much more.
